Claims 1-12 are generic to a plurality of disclosed patentably distinct species comprising methods of corn breeding comprising crossing a male fertile and a male sterile maize plant, each plant containing at least one recessive allele at two starch synthesis gene loci, wherein 26 different loci are claimed. See claims 5 and 11 for a recitation of the 26 different genetic loci.

Each species is patentably distinct from the other, since each involves plants with recessive alleles at different loci, each locus having a different sequence, and each locus governing the expression of a physiologically and biochemically divergent enzyme having a divergent effect on starch content and morphology.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Art Unit: 1638

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
